Marston B176 was purchased as a joined female, E2 is her first calf. B176's next joining was synchronised with the balance of Doondi females and she is about to calve again now.

### GeneSTAR Explanatory Notes

The GeneSTAR Tenderness test is a DNA based test for variants of the bovine calastatin gene. The test detects two different forms of the gene associated with increased tenderness.

The GeneSTAR marbling test is a DNA based diagnostic that test for major genes associated with marbling in beef cattle. It is believed there are a small number of genes that have a major effect on marbling.

2 Star—Carries two copies of the favourable form of the GeneSTAR Marbling or Tenderness gene

1 Star—Carries one copy of the favourable form of the GeneSTAR Marbling or Tenderness gene

0 Star—Carries zero copies of the favourable form of the GeneSTAR Marbling or Tenderness gene

EBV	+11	+14	+18	+19	-2

DAM: MARSTON B113

Marston B113 was purchased as a joined female from Marston Past Co. B113 has become one of our favourite females, her high fertility combined with her tremendous mothering instinct makes her a great asset. B113 raised D9 (Dozer) E12 Doondi heifer and has calved again with another outstanding bull, whilst also raising her second poddy F7 another Doondi heifer. 4 calves in 2 years—what a girl!
